

Exemplary XCP Command Codes

Each XCP command is defined by a command code. The command code is transmitted in the first byte of a XCP packet – the so-called Package Identifier. In short PID. The command codes are listed in ASAM's specification of the XCP protocol. The following table contains a set of XCP commands and their corresponding command codes.

Use the table to identify the XCP commands of the exercise by analyzing the first byte of each XCP packet.
